Cognition and Decision-Making

RELATIVE FRAMING

Users lost 100% more weight with our fat-burner!

📊 Sounds impressive — but what does it actually mean?

ABSOLUTE FRAMING

Users lost 4 lbs vs. 2 lbs in 12 weeks. = Only a 2-pound difference.

📏 That's just 0.16 lb per week — likely within the margin of error for daily weight fluctuations.

People often **overestimate effects** when numbers are framed relatively without context. **Absolute numbers** ground expectations in reality, which is crucial for informed decisions in health, finance, and risk management.
